

## **STAGE 2'S HOSTED BUSINESS PHONE SYSTEMS AND SERVICES**

Let Stage 2 help you take advantage of the most advanced telecommunications technology available without incurring the capital costs typically associated with purchasing, installing and maintaining such a system.

### **CONSERVE CAPITAL**

With Stage 2's hosted business phone systems, upfront expenditures are typically limited to your IP phone equipment. A private broadband connection to our state-of-the-art BroadSoft switch then allows you access to Stage 2's feature-rich platform with guaranteed quality of service. In addition, our connection can double as your high-speed connection to the Internet, or as a backup to an existing connection.

### **EASY TO IMPLEMENT**

Stage 2's hosted business phone system is easier to implement than a large-scale, customer premise-based solution. In other words, we save you time and money when compared to a complex and difficult-to-deploy switch that is housed in your office. With Stage 2, the technology resides primarily in the core of our network, which you access via broadband connectivity that we provide.

### **IDEAL FOR MULTIPLE LOCATIONS**

Stage 2's hosted business phone systems platform is particularly well suited for multiple-location and growing companies. Four-digit dial your colleagues, whether they are across the street, across the country or around the world.

### **AVOID OBSOLESCENCE**

Stage 2 provides ongoing software upgrades and maintenance at no additional cost as a component of your fixed monthly charges, and our IP phones will work on any IP network. Stage 2 is committed to running the most recent release of software on our platform and offering the latest technological developments available in the market after thorough lab testing.

### HIGH-DEFINITION VOICE

Stage 2 offers the industry's most revolutionary technological audio breakthrough in years with the Polycom suite of HD Voice over IP phones that integrate with our switching platform.

### MORE INTEGRATION = MORE FUNCTIONALITY

Stage 2 customers enjoy the true integration between computer and phone systems that our services and solutions provide:

- Converged voice and data over broadband.
- Unlimited usage plan.
- Advanced features – “Find Me/Follow Me,” conference calling and more.
- Business continuity and disaster recovery efficacy.
- Add, move and change user profiles instantly via the Web.
- Unified mailbox – “Click to Dial” from Microsoft Outlook.
- One number to call; one bill to pay.
- High-definition phone features.
